Today We Shall

- Expect that you understand CI/CD with data (a bit more...)
- Take a look at SQLPackage
- Examine Publish Profiles
- Talk about and overcome difficulties
- Have a bit of fun along the way – It's ok to laugh!

SQL Package

Our focus for today!

Publish

Drift

Script

Report

Publish

Drift

Script

Report

Compares the target (SQL Server or Azure SQL DB) or a DACPAC with the source DACPAC.

```
SqlPackage /Action:DriftReport /TargetServerName: <ServerName>  
/TargetDatabaseName: <DatabaseName> /OutputPath  
Deploy_DriftReport.xml
```

Can create a drift report with all the changes that have been made since registering

Publish

Drift

Script

Report

Compares the target (SQL Server or Azure SQL DB) or a DACPAC with the source DACPAC.

```
SqlPackage /Action:Script /TargetServerName: <ServerName>  
/TargetDatabaseName: <DatabaseName> /SourceFile: "<DACPAC File  
Path>" /OutputPath: "<Path for Output Files>"
```

Can create an incremental update script to match source and target

Publish

Drift

Script

Report

Compares the target (SQL Server or Azure SQL DB) or a DACPAC with the source DACPAC.

```
SqlPackage /Action:DeployReport /TargetServerName: <ServerName>  
/TargetDatabaseName: <DatabaseName> /SourceFile: "<DACPAC File  
Path>" /OutputPath: "<Path for Output Files>"
```

Can create a deploy report with all the changes

on publish profile options

Publish

Drift

Script

Report

“But I really want to drop that column”

Publish

Drift

Script

Report

“Yay!”

- Use Pre and Post deployment scripts (2 publish actions needed)
- Use Publish Profiles
- Turn off “Block on possible data loss” temporarily
- Use a pre-pre deployment script 😊
